

Software engineer and founder. I graduated **top of my Computer Science class** at the University of the Witwatersrand (4.0 GPA, *cum laude*, full scholarship), and have spent **3+ years building production software** for clients and my own startups. Lately most of that work is AI: tools and automations built on Claude, several of them live and open-source.

EXPERIENCE

- Innovations Lead · Industrial Data Xchange (IDX)

Jan 2026 – Present · Johannesburg

 - Lead IDX's AI innovation work: I build the internal tools and automations that speed up operations, improve data quality, and connect supplier systems.
 - Sit with clients and internal teams to work out where AI actually helps, then build, demo, and ship it. A lot of the role is discovery and pitching.
 - Use Claude Code every day to build and run production automation.
- Co-Founder & CIO · Emfito (Email Finder Tool)

Apr 2024 – Apr 2025 · Remote

 - Co-founded an email-finding tool and ran the technical side, designing the system that finds and verifies email addresses fast ([emfito.com](#)).
- Software Developer, founding member of "Enhancing Wits" · University of the Witwatersrand

Oct 2023 – Dec 2024 · Hybrid

 - Pitched a plan to improve daily life for students and staff to the ICT department heads, Dean, and Deputy Dean. They hired us to start a new software team to build it.
- Freelance Developer & Claude Code Tutor · Upwork

Jul 2023 – Present · Remote

 - Built web-scraping and automation projects for clients across a range of industries.
 - More recently, teaching individuals and teams to integrate Claude into their work and build with it.

SELECTED PROJECTS

- nextup** · [next-up.co.za](#)
A live pickleball platform that runs club league nights: continuous rolling games over a timeslot, with automatic match-ups, court assignments, and live leaderboards. Players check in, partner up, and get buzzed when their next match and court are ready. I built the first version solo with Claude; as it grew into a paying product used by real clubs and players, I brought on two developers and moved to architecture and the business side.
- explore-claude-code** · [open-source](#) · [exploreclaudecode.com](#)
An interactive guide to Claude Code: you click through a simulated project to learn how MCP servers, sub-agents, agent skills, hooks, and config actually work.
- Matins** · [matins.news](#)
A daily, AI-written brief on what changed in Claude Code. A Python pipeline pulls sources, analyses them with Claude, and emails subscribers, running by itself each day on a scheduled Anthropic cloud routine. Site built in Astro.
- Other ventures.** Early-stage products I have founded, including [clickt.link](#) and [me2you.world](#).

EDUCATION

- BSc Honours, Computer Science · University of the Witwatersrand

2025

4.0 GPA, *cum laude* · top of the class · Dean's List · full academic scholarship.

Honours research with **Dr Benjamin Rosman** (named to TIME's 100 Most Influential in AI, 2025) and Dr Steven James: I built an adaptive preprocessing pipeline for privacy-preserving document scanning that improved redaction accuracy by **28.5%** over a fixed pipeline. Won **Best Applied Project** at Wits Innovation Day.
- BSc, Computer Science · University of the Witwatersrand

2022 – 2024

4.0 GPA, *cum laude* · Dean's List.

AWARDS & RECOGNITION

- Winner, African Innovation Challenge (Kigali, Rwanda), representing Wits among 17 universities.
- ABSA Top 30 Emerging Entrepreneurs.
- Best Applied Project, Wits Innovation Day 2025.
- 1st place, Computer Graphics & Visualisation, Wits Innovation Day 2024.
- 2nd place, Software Design, Wits Innovation Day 2024.
- Full academic scholarship; Dean's List (multiple years).

TECHNICAL SKILLS

Languages: Python · TypeScript · JavaScript · Java · C++

AI & Claude: Claude & Claude Code · MCP servers · sub-agents · agent skills · hooks · prompt engineering · AI pipelines & automation

Engineering: systems architecture · web scraping · data tooling · Astro · git **Other:** customer discovery · demos & pitching
